strongly recommended to subscribe to this Moodle course, and keep their subscriptions for the rest of the semester. Questions and discussions are welcome through the discussion forum linked below.

Dozent*in: Cagri Coltekin

[Language Evolution](#)

This course gives an introduction to current topics in language evolution research. We will first cover the basics of human evolution in general. This includes an overview of the paleoanthropological, archaeological, and genetic evidence. We will then focus on research topics more specific for the evolution of language, such as the connection between language and stone tool production, comparative studies with animal communication systems, and evolutionary semiotics. The latter is a currently developing research field which sheds light on how signs and symbols have evolved over historical, but also over deeper evolutionary time in the genus Homo.

[Multimodal communication: a linguistic approach \(Block Seminar\)](#)

In this course we will discuss the role of multi-modal cues in linguistic communication. We will discuss how the cues coming from the visual modality (in the form of co-speech gestures) and auditory modality (in the form of suprasegmental cues) interact to convey the intended meaning in a linguistic utterance. We will take the visual and auditory modality as a single integrated system that aids linguistic communication (McNeill 1992). Students will develop an understanding of how cues from these two modalities interact. Fundamental aspects of prosody, including prosodic constituents and categories, will be discussed. They will build knowledge about the forms and functions of co-speech gestures and how they are directly or indirectly linked to the linguistic modality and prosody. The course will address the interplay between gestures and prosody, exploring how gestures align with prosodic prominence, the temporal relationship between gestures and accents, and the analyses of both systems that contribute to the modeling of prosody-gesture integration. The primary goal of this course is to provide participants with a thorough understanding of how prosody and gestures interact in communication. Along with exploring the complexities of this interaction, the course will also cover other functions of gestures.
